Form 851

Dear Mr. Cox:

SW

In regard to well #14 in 23-23-7, this well was produced in the Simpson originally, When it was not commercial productive. We opened the Arbuckle below the Simpson and are putting water in the Arbuckle at 27 points of vacuum. It will not pass the test because of water going into the Simpson down the annulus.

7 This well is due for test on May 10, 1985 but it is too muddy for it at this time.

Respectfully,

Ed Clemishire
